OUR PRODUCTS

SPORT

Our **REGUPOL sports and safety floors** not only provide the performance and the safety that is needed, but are also available in a range of various versions and colour designs. Their functional sport-relevant properties provide athletes in various sports disciplines with the support they need – whether it's running tracks, gym floors, winter sports flooring, floors for indoor sports and climbing halls, fall protection flooring, safety floors for shooting facilities and martial arts mats.

ACOUSTICS

Urbanisation is a mega trend. Due to an already great shortage of space, intelligent urban densification will have to take account of changing lifestyles and will have to realize the conflict-free combination of working, living, retail and leisure activities in a confined space. With **REGUPOL** at your side providing the correct acoustic and vibration isolation solution, the quality of the space created to achieve this can be significantly enhanced.

STRUCTURAL PROTECTION

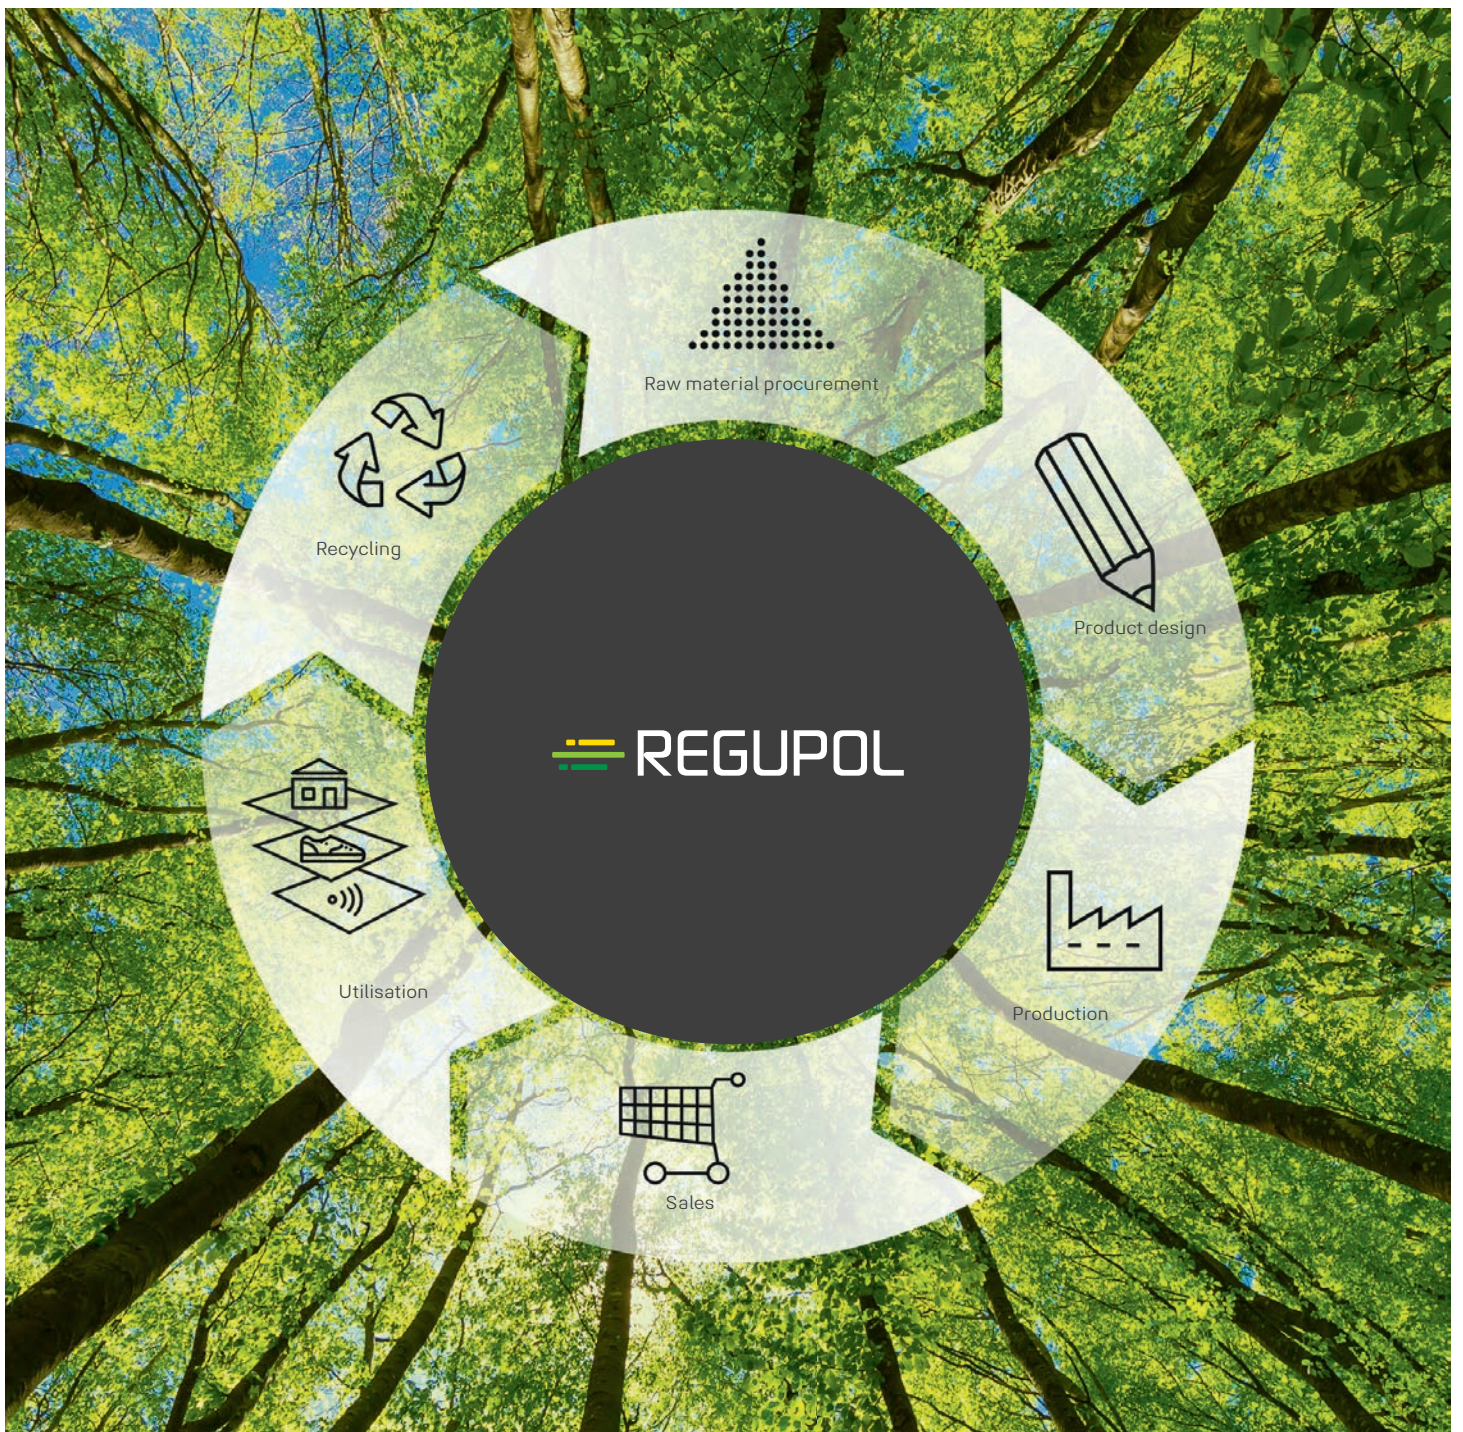

Our **REGUPOL structural protection mats, pads, and membranes** will permanently and reliably prevent damage to seals sensitive membranes and insulation of structural elements. In addition, the mounting structures for photovoltaic systems can be built on our **REGUPOL protective mats** to prevent damage to the roof sealing membrane here, too.

LOAD SECURING

Whether working with diverse maximum loads, sensitive cargos, heavy loads or in extreme weather conditions, with our **REGUPOL anti-slip mats** for load securing, one is always on the safe side.

Certified quality

SUSTAINABILITY

IS IN OUR DNA

Ever since it was founded in 1954, the company has been involved almost exclusively in recycling elastic raw materials, such as rubber, EVA and PU-foam. That has made **REGUPOL** one of the largest recyclers of such materials in the world. Recycling was the purpose of the company from the outset, even at a time when the term itself was largely unknown. That makes **REGUPOL** a pioneer in the circular economy.

Typically, **REGUPOL** products consist of between 75 -95 % of recycled materials. The same applies for the sports mats. **Regufoam®** is manufactured from genuine raw materials. For some products, additional features are available, such as surface coating, which are also made of primary raw materials.

REGUPOL BSW has been certified with DIN EN 14001 continuously since 1997 and will maintain this certification in future.

All **REGUPOL** products and mats comply with the § 45 II No. 2 of the draft bill on circular economy.

In 2016 we compiled a CO₂ balance for our production site with the help of the energy efficiency agency in NRW, in which we showed all our company's direct and indirect greenhouse gas emissions in CO₂-equivalents. We save CO₂ emissions the equivalent to the emissions from more than 65,000 cars every year by manufacturing products from recycled materials rather than virgin materials.

90 000

tons of recycled
elastomers per year

95 %

sales export

REGUPOL is a member of the "Initiative New Life" and works with the other member companies to ensure an optimal circular economy. Together, the members want to demonstrate the advantages of recycling products from end-of-life tires (ELT) and motivate to act sustainably.

COMPLIANCE

Best results in the field of product quality and service, impressive achievements that a dedicated team provides, partnership-based cooperation and the will to succeed together. We continue to strive for this success in the future and want to expand our market position. In order to achieve this, the **REGUPOL** Compliance Directive should be the basic order of our conduct. This includes rules for our behaviour within **REGUPOL BSW GmbH** and externally with our customers, suppliers and business partners.

Our numerous references are testimony to our performance. Burj Khalifa in Dubai, the Elbphilharmonie concert hall in Hamburg or the Olympic Stadium in Berlin have all benefitted from our products.

REGUPOL among winners of state environmental economics prize 2020. With its "Let's change" sustainability strategy, **REGUPOL** thus demonstrates that the circular economy is an essential aspect of its economic activities. **REGUPOL** is one of world largest recyclers supplies around 132 countries every year and is present in important markets with its own subsidiaries. **REGUPOL** currently processes over 90,000. tons of recycled elastomers every year, making a major contribution to the sustainable use of valuable resources.

Read more about us winning the **Environmental Economics Prize** and find our **compliance brochure** on our website www.regupol.com
